

Specific directions for NPC- installation to GK Software cash system
(Videoserver Application)

Each point-of-sale with the installed and activated service to transfer transaction data via the network sends booking data such as **Broadcast** via the LAN (Local Area Network, in this case network of points-of-sale). Whether the desired point-of-sale has the necessary service of software requirements at its disposal should be cleared with or requested from the supplier responsible for the points-of-sale..

Configuration NPC:

Einstellung/Zuordnung:

The IP-address / portnumber of the NPC has to be set in accordance with a free/ unused IP- address of the local network and the base portnumber of the cash register (configuration under „system.properties“).

This base port of the cash register starts - due to the characteristics of the system - from 10000. The NPC has already an internal offset 10000 additionally to the defined port number (Default: 0000).

Example: Base port on cash point: 10500: -> portnumber setting on NPC: 500

Furthermore the Pos-no has to be equal to the register number of the desired cash register compare to the register number on the operator screen!). In case of Pos-no = 00 the data off all registers will be transmitted).
